PROPERTY OVERVIEW

Prime 5.69-acre Light Commercial property in Little Elm with city water and sewer.

3411

PR KING RD

3411 PR King Rd
Little Elm, TX 75036

PROPERTY DETAILS

Unlock the potential of this 5.69-acre parcel in the thriving City of Little Elm, perfectly zoned Light Commercial (LC) to accommodate a variety of business ventures. Situated in a highly desirable location, this property offers excellent access and utility infrastructure, making it a prime opportunity for developers and investors.

Key Features:

- **Zoning:** Light Commercial (LC), suitable for retail, office, or service-based businesses.
- **Utilities:** Fully equipped for development with power, city water, and city sewer recently installed. The addition of city water and sewer provides reliable, cost-efficient services and eliminates the need for private septic or well systems, ensuring streamlined development and ongoing maintenance.
- **Main Access:** Convenient entry from King Road ensures visibility and ease of transportation.
- **Second Access Point:** Newly recorded access off Bishop Hill, designed for emergency service use, meets all city requirements.
- **Stocked Pond:** A large, serene pond enhances the aesthetic and functional appeal of the property, offering potential for landscaping or recreational integration.
- **Central Location:** Ideally situated within Little Elm, providing easy connectivity to major thoroughfares and a growing community.

This versatile property combines the charm of natural features with the practicality of modern infrastructure. The recent addition of city water and sewer further increases the property's development potential, reducing costs and compliance concerns for future projects. Whether you're planning to establish a business or create a commercial development, this lot provides the space, utilities, and location to bring your vision to life.

Don't miss this opportunity to invest in a growing market with endless possibilities!

Flood Risk Analysis
FEMA Map Last Updated:1969-12-31

LOCATION RISK ANALYSIS

Flood Hazard Designations

FEMA Map Last Updated: 1969-12-31

High Risk Area - Flood hazard areas identified on the Flood Insurance Rate Map are identified as a Special Flood Hazard Area (SFHA). SFHA are defined as the area that will be inundated by the flood event having a 1-percent chance of being equaled or exceeded in any given year. The 1-percent annual chance flood is also referred to as the base flood or 100-year flood. SFHAs are labeled as:

Zone A: Areas subject to inundation by the 1-percent-annual-chance flood event generally determined using approximate methodologies. Because detailed hydraulic analyses have not been performed, no Base Flood Elevations (BFEs) or flood depths are shown. Mandatory flood insurance purchase requirements and floodplain management standards apply.

Zone AE and A1-30: Areas subject to inundation by the 1-percent-annual-chance flood event determined by detailed methods. Base Flood Elevations (BFEs) are shown. Mandatory flood insurance purchase requirements and floodplain management standards apply.

Zone AH: Areas subject to inundation by 1-percent-annual-chance shallow flooding (usually areas of ponding) where average depths are between one and three feet. Base Flood Elevations (BFEs) derived from detailed hydraulic analyses are shown in this zone. Mandatory flood insurance purchase requirements and floodplain management standards apply.

Zone AO: Areas subject to inundation by 1-percent-annual-chance shallow flooding (usually sheet flow on sloping terrain) where average depths are between one and three feet. Average flood depths derived from detailed hydraulic analyses are shown in this zone. Mandatory flood insurance purchase requirements and floodplain management standards apply.

Some Zone AO have been designated in areas with high flood velocities such as alluvial fans and washes. Communities are encouraged to adopt more restrictive requirements for these areas.

Zone AR: Areas that result from the decertification of a previously accredited flood protection system that is determined to be in the process of being restored to provide base flood protection. Mandatory flood insurance purchase requirements and floodplain management standards apply.

Zone A99: Areas subject to inundation by the 1-percent-annual-chance flood event, but which will ultimately be protected upon completion of an under-construction Federal flood protection system. These are areas of special flood hazard where enough progress has been made on the construction of a protection system, such as dikes, dams, and levees, to consider it complete for insurance rating purposes. Zone A99 may only be used when the flood protection system has reached specified statutory progress toward completion. No Base Flood Elevations (BFEs) or depths are shown. Mandatory flood insurance purchase requirements and floodplain management standards apply.

Zone V: Areas along coasts subject to inundation by the 1-percent-annual-chance flood event with additional hazards associated with storm-induced waves. Because detailed hydraulic analyses have not been performed, no Base Flood Elevations (BFEs) or flood depths are shown. Mandatory flood insurance purchase requirements and floodplain management standards apply.

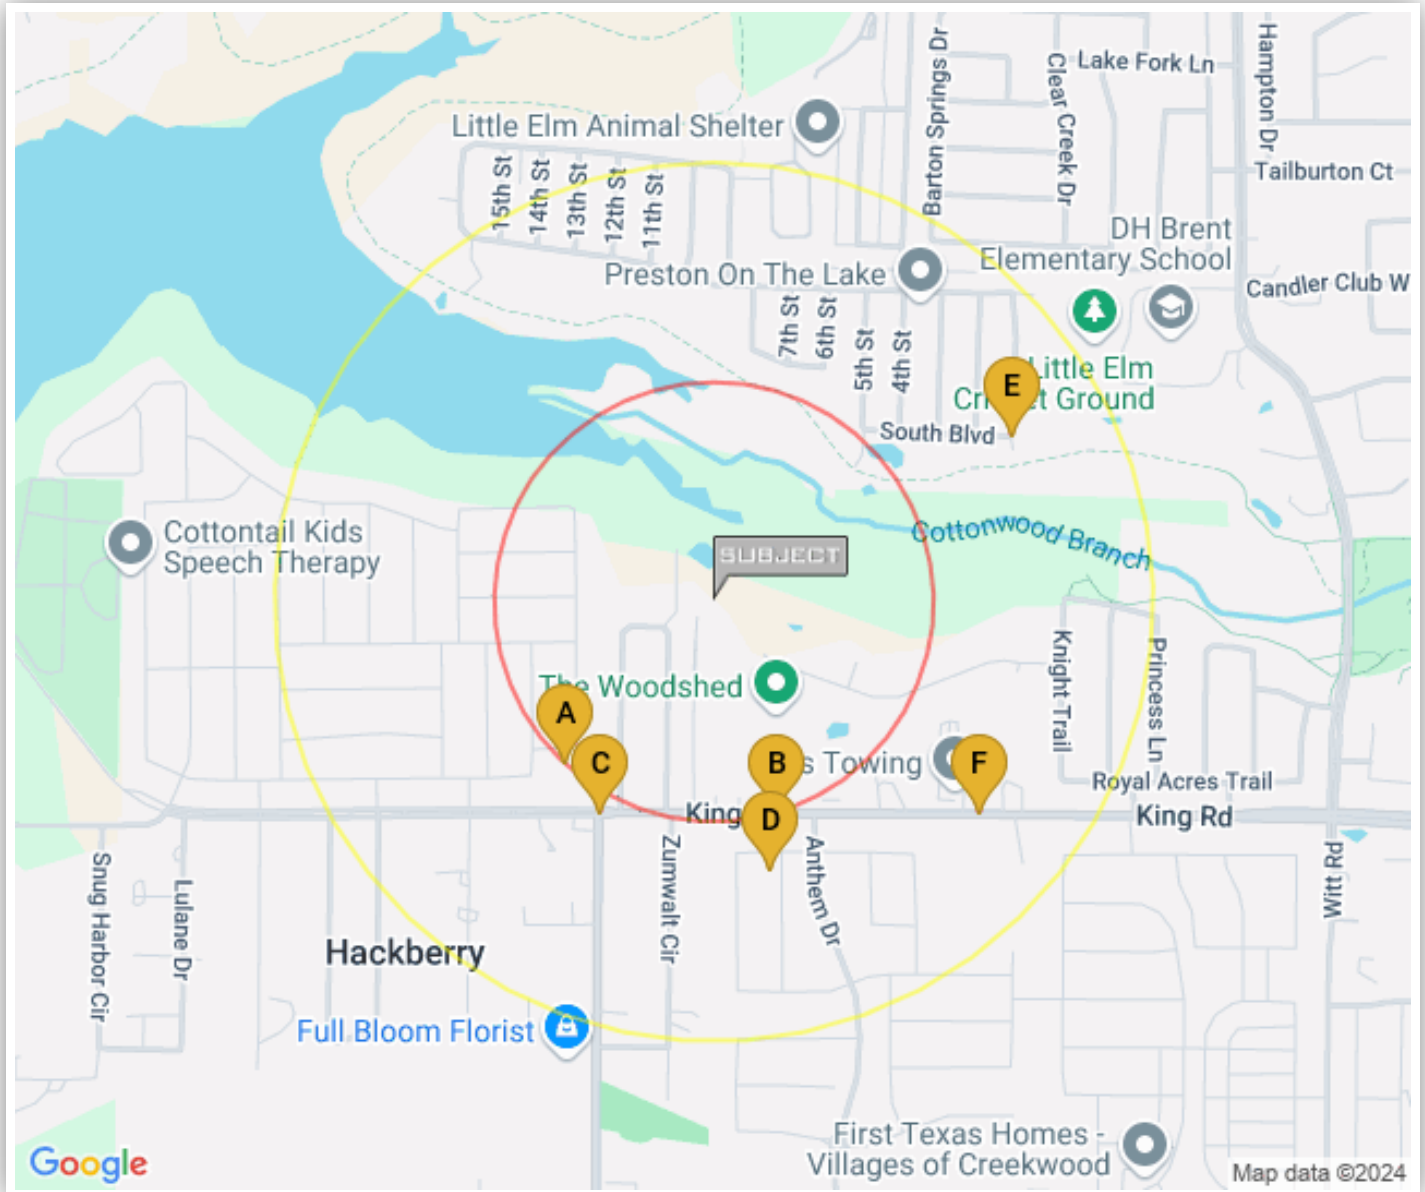

Zone VE and V1-30: Areas subject to inundation by the 1-percent-annual-chance flood event with additional hazards due to storm-induced velocity wave action. Base Flood Elevations (BFEs) derived from detailed hydraulic analyses are shown. Mandatory flood insurance purchase requirements and floodplain management standards apply.

Moderate Risk Area - Labeled Zone B or Zone X, are the areas between the limits of the base flood and the 0.2-percent-annual-chance (or 500-year) flood.

Low to Moderate Risk Area - Labeled Zone C or Zone X, areas outside the SFHA and higher than the elevation of the 0.2-percent-annual-chance flood.

LOCATION RISK ANALYSIS

Data Quality & Sources

The Environmental Risk Analysis is limited to the 25 environmental records closest to the subject property location. EPA, authorized or delegated states, tribal and local jurisdictions conduct compliance assurance and enforcement activities related to federal environmental laws. Each level of government works to ensure that information contained in national databases is accurate. The migration of data from many jurisdictions to multiple national program databases is a challenging task. Some state and local jurisdictions directly enter data to national databases, while others maintain their own databases and transfer data to EPA through batch processing. Under both approaches, steps are taken to ensure that the data are of the highest quality (e.g., each database maintains standards and procedures for ensuring data integrity on a day-to-day basis).

Data are continuously evaluated. Through periodic analysis, conference calls, and national meetings, database managers at all levels of government work to ensure quality information.

The facility locations displayed come from the FRS Spatial Coordinates tables. They are the best representative locations for the displayed facilities based on the accuracy of the collection method and quality assurance checks performed against each location. The North American Datum of 1983 is used to display all coordinates.
