

MINNESOTA

# Electric Transmission Lines and Substations

60 kV or larger  
2008

In cooperation with the MN Department of Commerce, MN Public Utilities Commission, MN Department of Transportation and electric utilities with transmission facilities in Minnesota, the MN Environmental Quality Board and the Minnesota Geospatial Information Office have created a geo-spatial database (GIS) consisting of electric transmission lines over 60 kilovolts operating in Minnesota. The GIS data will allow the MN Environmental Quality Board to better execute its responsibilities of routing transmission lines. In addition to mapping existing lines, protocols and procedures will be established to ensure that the database is updated regularly.
